Diesels cars do not belong in the city centre?

Not long ago, a young little girl was diagnosed with a serious respiratory disease and doctors suspect that it happened because of the high level of air pollution.

The Green Party submitted a bill on banning diesel cars out of the city centre. Negotiations have already started but they have lead nowhere. According to the Traditional Party highlighted the fact that the economy of the city is depends a lot on the local car factory, because of potential reduction in capacity, citizens could lose their jobs.

Since, both ot the parties find that citizens are highly involved, they have decided to hold a City Council with the Mayor and decide on the topic together, with the citizens.
